What does your website say about your practice?

Relatively few dentists in the UK have websites, and of those that do very few fully utilise the potential that this medium offers.

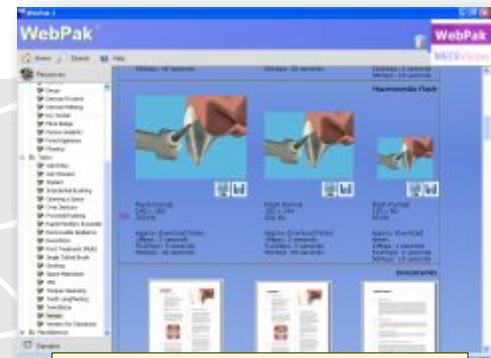

WebPak from MEDiVision has been devised to help you and your web designer improve the content of your website, making it more informative, attractive and professional.

Why provide an informative website?

The general public relies more and more heavily on the internet as a source of information. Practice websites are easily accessible from search engines such as *Google* and *Yell.com*.

The look, feel and professionalism of your website can determine whether prospective patients call you or another dentist. Existing patients may also use your website outside of normal working hours, for oral health advice and information about additional services that you provide.

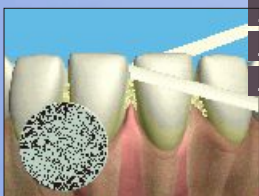

WebPak provides an instant and easy-to-use source of this information.

Sample of WebPak content for "Veneer"

40 animated topics ready to use

WebPak contains website media on **40** different topics from Adhesive bridges to Veneers. The product contains files in a variety of sizes and formats to suit all website designs and all website designers! New Sample layouts illustrating how pages can be laid out are included and you can just cut-and-paste these onto your site.

Animations

3D animations are very rarely seen on a dental website because they are very costly to develop. WebPak has a complete library in different sizes and formats ready to enhance your site.

There is also a variety of miscellaneous animated dental objects to create interest on your website.

If you already have a practice website, it is easy to enhance it using the resources within WebPak. If you have a web designer, give them the CD-ROM and select the information you want them to add.

If you don't yet have a website, now is the time to take the plunge. WebPak will save you 'creative' time and money and is guaranteed to enhance any dental website.

Leaflets

Illustrated leaflets, covering many topics, which patients can browse and print directly from your website not only add important content to your site but will encourage patients to visit your site again and again.

JPG

Photographs

All dental websites need photographs but obtaining permission to use high quality images on a range of topics is time consuming and expensive. WebPak has many images optimised for use on your site.
