Stars of Dentistry 2018 is almost here!
Implant dentists who want to introduce dynamic navigation into their workflow can attend a bespoke course presented by certified master clinical trainer, Dr David Burgess. The two-day masterclass takes place at Dr Burgess’ state-of-the-art clinic in Carbis Bay, Cornwall.

Each course is limited to five delegates and the content is tailored to the specific requirements of the attendees. It includes hands-on training and live surgery observation to give a comprehensive insight into the benefits of computer-guided freehand implant placement.

Two delegates travelled from India to attend the course in February, inspired by the feedback from other dentists who had trained at Carbis Bay. According to Dr Lambodharan, professor and head of prosthodontics at the CSI College of Dental Sciences and Research in Mandurai: ‘David Burgess’ course delivery was outstanding and made the dynamic navigation process crystal clear. ‘I found the Navident system very user friendly and was impressed with the precision that can be achieved with this procedure.’

To find out more about the Masterclass in dental dynamic navigation, contact Carolyn Hocking at Carbis Bay Dental Care on 01736 793090 or email carbisbaydental@btconnect.com. Introductory one-day dynamic navigation courses are also available. For 2018 dates and further details, visit www.thedentalimagingcompany.co.uk/courses-events.
Navident

Targeting Perfection

Dynamic navigation for freehand dental implant placement

See where the tip of the drill actually is, not where you think it is. Navident allows you to prepare the implant site completely freehand and with greater precision and confidence, using your CBCT data in real time as your virtual guide.

- Precision guidance for increased accuracy within 0.5mm of treatment plan*
- Easy to use, reducing time and expense with a simplified digital workflow
- Plans can be modified at any time, even during treatment
- Enables minimally invasive flapless drilling without a physical guide
- Provides even greater value from your CBCT data

“What makes Navident stand out is it precisely guides the surgeon to prepare and place the implant. The software shows the drill position on the scan in real time, as it enters the jaw.”
