

CS 1500

The ideal communication starter

The CS 1500 intraoral camera is the ideal communication tool for any dental practitioner. Delivering precise, true-to-life images with each shot, the CS 1500 camera provides the powerful evidence you need to educate patients and to help them visualize their diagnosis and treatment plan more realistically. Now you can let patients see exactly what you see – so they make smarter decisions, and are more likely to accept treatment.

Industry-leading resolution and focus range

Boasting the industry's highest still image resolution, the CS 1500 camera provides all the functions you need to capture sharp, clear color images. And with the widest focus range available (1mm to infinity), practitioners can clearly view even the smallest details – making treatment planning and patient education easier and more accurate than ever.

Portable and economical

USB technology lets you share the CS 1500 camera between several treatment rooms, which means you can use it anytime and anywhere you need it. Simply plug the camera straight into your computer, and you're ready to work – no docking station required. In seconds, you

can view the images on your monitor and store them on your hard drive. It's the easiest way to access and share patient images.

Effortless image capture

The CS 1500 camera's one-button image capture allows anyone on your team to capture clear, detailed images quickly and easily. Combined with a true autofocus, the camera's unique liquid lens technology works like the human eye to ensure clear, detailed images each and every time.

Flexible, all-purpose design

The CS 1500 camera is a versatile tool for any dental practice. With just one camera, you can capture still images and fluid videos, perform both intra- and extraoral exams, and quickly display images on your choice of a PC or video monitor. And, with two configurations available – wireless, or a wired USB version, the CS 1500 camera is designed to meet the specific needs of any dental practice.

Simply integrated

Easily modify, store, and manage your images and videos with the included Carestream Dental's imaging software. Simply press the acquisition button to capture a still image and it's automatically saved to your computer or SD card. Images can then be integrated into patient files, printed, and shared.

Reliable services and support

We provide the guidance and support you need to get the most out of your CS 1500 camera. Our experienced support experts are here to help you integrate your camera into your practice and are available to answer your questions before, during, and after your purchase.
